The STEAM² Academy utilizes curriculum, hands-on activities, and equipment developed in conjunction with:

NASA California Space Grant Consortium

National Science Foundation-funded
High Performance Wireless Research and Education Network

National Park Service

First class meets on Saturday, July 12, 9am-12pm – Botany

Our first class will focus on the study of plants: Botany! We'll meet in Room One at the Rec Center and learn about the classification of plants, their needs, and uses by looking at varying plants with the naked eye as well as our microscope and magnifying glass. We'll then take a hike at the nearby Carmel Mountain Preserve to learn about the local vegetation and how they survive in the current drought. We'll also use our artistic skills to sketch a few plants and flowers – detailing our favorites!
